Class Description

App

This is the python file that contains the main control loop for the Quinterac banking system's Back Office.

Transaction

This file contains the class and all of its methods to handle a single transaction. The methods used to handle a single transaction are update, createAcct, deleteAcct, withdraw, deposit and transfer.

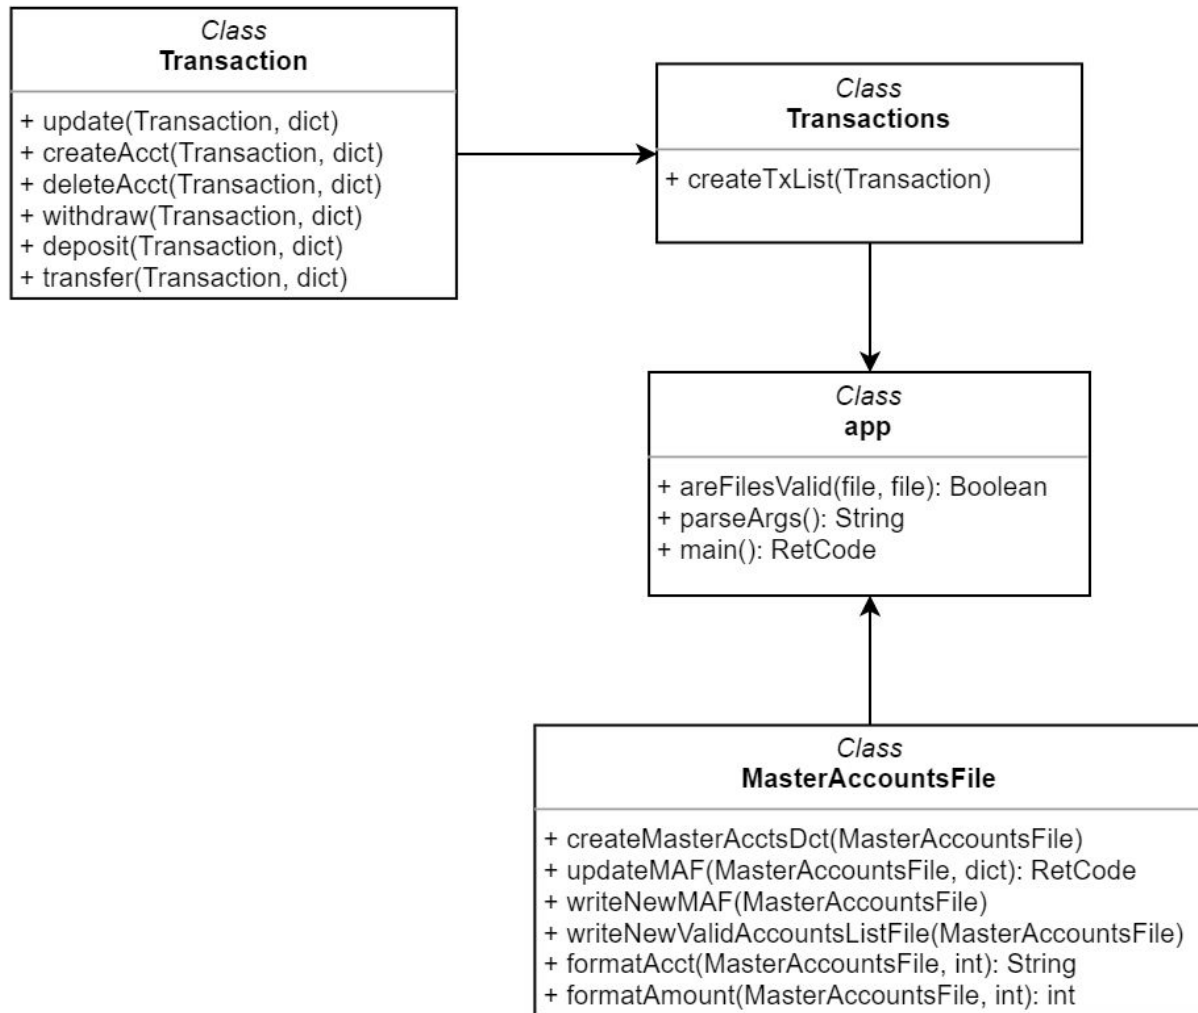

Transactions

This file contains the class to handle dealing with a list of transactions. The createTxList function reads through all of the transactions in the Merged Transaction Summary File and creates a Transaction object for each one that is not an EOS adding them to the class 'lst' attribute.

MasterAccountsFile

This file contains the class and all of its methods to handle updating the Master Accounts File and writing the new Valid Accounts List File.
